### 1-1 Solutions Manual

1-13C The rate of heat transfer per unit surface area is called heat flux  $q$  It is related to the rate of heat transfer by  $Q = qA$  1-14C Energy can be transferred by heat, work, and mass An energy transfer is heat transfer when its driving force is temperature difference

### Chapter 2 HEAT CONDUCTION EQUATION

Heat transfer is one-dimensional if it occurs primarily in one direction It is two-dimensional if heat transfer in the third dimension is negligible 2-2C Heat transfer is a vector quantity since it has direction as well as magnitude Therefore, we must specify both direction and magnitude in order to describe heat transfer completely at a point
