a singularity either at the inner or outer CM space boundary** The first strategy is to fold the robot completely over on its self ($\theta_2 = 180^\circ$), moving the robot's CM to the inner CM space boundary The second strategy is to fully extend the robot ($\theta_2 = 0^\circ$), moving the robot's CM to the outer CM space boundary This second strategy would

Marine Vehicle Path Following Using Inner-Outer Loop Control

Abstract: This paper addresses the problem of marine vehicle path following using inner-outer loop control, with due account for the vehicle dynamics We propose an inner-outer control structure that lends itself to a simple intuitive interpretation and exhibits three key advantages: i) it allows for decoupling in the design of the inner and
